MAKING THINGS SMARTER
ARCS2

Remote Access to Universal Robots

ARCS2 from AIRGATE is the second generation communication solution for Universal Robots. ARCS2 solution makes it even easier to get in touch with your Universal Robots and now for FREE!

- get remote access to any robot via VNC to troubleshoot, program or even control your Universal Robots, or your customers Universal Robots.
- get e-mail notifications if any robot stops unexpectedly.

ARCS2 is a software-only solution for easy download on airgate.dk and for installation directly into the teach pendant of the Universal Robots. ARCS2 comes in two versions:

- a remote access version for local LAN communication (FREE version).
- a remote access version for global communication via a Secomea integrated software gateway.

Both versions comes with an updated and more user friendly URCap GUI for all Universal Robots CB-series and E-series.
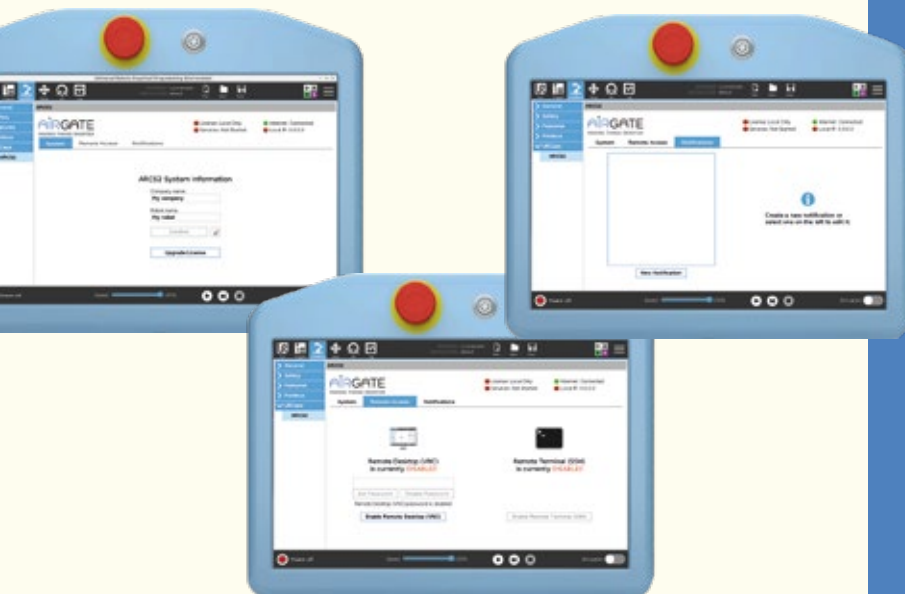

ARCS2

What we do at AIRGATE

At AIRGATE we make Robotics software solutions. AIRGATE is a certified Universal Robots developer offering the ARCS solutions to Universal Robots distributors/Integrators and end-customers. ARCS is a hardware communication solution. ARCS2 is a software-only communication solution. Both ARCS versions use very secure communication gateways from Secomea.

At AIRGATE we make URCaps, which are software applications for easy integration of end-effectors and accessories into Universal Robots for industrial solution partners. AIRGATE develop URCaps for both Universal Robots CB-series and E-series. URCaps is a necessity to be part of the UR+ presence and is a strong tool for supporting sales to any industrial customer.

UNIQUE BENEFITS WITH
AIRGATE ROBOT COMMUNICATION
SOLUTION - ARCS2

1. User friendly and intuitive graphical user interface

2. Software-only solution

3. Easy to download and install

4. Free local LAN remote access version

5. Global remote access version with Secomea gateway

6. E-mail notification if robot stops unexpectedly

7. Integration possible with AIRGATE IoT platform for robot data monitoring
